

Batters Box and Baseline Painting Diagrams

Instructions for Drawing Batters Box

1. Connect PVC Template (string is to keep pieces from being lost and help putting pipes together in correct position).
2. Place PVC template next to home plate as shown in the diagram to the right. NOTE: the short tube measures the proper distance from home plate, when pointed to the corner of the plate indicated in the diagram.
3. Push the template into the dirt to leave an imprint, and/or trace along the template with a bat, stick or finger.
4. Run the line painting machine to draw lines for the 6'x3' box made in the dirt by the template.
5. Repeat for Other side of home plate.

Example string layout for drawing 3rd base line
